2 tablespoons = 1 ounce; 16 ounces = 1 pint; 8 pints = 1 gallon; 1 gallon = 3.785 liters  
 Table Formula --> ( fuel \$/gal)x( % increase mpg)x( oz/gallon EFR)x( gal. treated/oz. EFR) = Total fuel savings in dollars

**This table helps determine your SAVINGS ON FUEL when using 1 gallon of Ethos FR.**

- (1) From the top row find the percent improvement in Miles or Kilometers per gallon from using ethos FR..
  - (2) From the left hand column find the closest average cost per gallon of fuel you presently are purchasing.
  - (3) Where the two intersect is your actual SAVINGS in total dollars from using 1 gallon of Ethos FR.
- \* To properly use this table you must take odometer and other readings to determine your Percentage increase in Miles per gallon.
